

BeesNest is a software publisher operating on the middlewares communications market.

Acting as a "connector", BeesNest offers the link between customer installed trade fields within your company and services offered by a third-party internet provider. (ASP platform)

Product Strategy

- Commercial communications (Fax, sms)
- Legal communications (e-mail tracking).
- Dematerialization procedures (Tele-declaration, electronic invoicing)
- Legal archiving
- Third party trust (Time stamping, Electronic signature)
- Document dematerialization (L.A.D)

An ASP fax connector making it possible to establish a low cost link between your trade field and a fax operator.

This connector was devised with the intent of offering a pragmatic compromise between an ASP fax, disconnected from internal applications and a fax network solution that despite having many functions, remain costly.

The ASP fax connector is outfitted to send out estimates, stock inventory, purchase orders, delivery confirmations, invoices, reminders, wire-transfer requests, support confirmations etc...

The ASP fax connector uses the telecommunication infrastructure from the fax operator; Premier Global Services.

Customer Specifications

- Adding a dispatch function without modifying the initial trade field
- No fax cards are necessary
- A reliable transmission band adapted to the volume of exchanges
- Low ownership and operating costs.
- Excellent tracking system
- Rapid operating procedure

Function Details

Adding a fax function

The principle of integrating a fax function serves to first capture then to process the printing flow. Programmed rules will automatically search for "tags".

Ex :

- Filtering certain types of in-coming documents (invoices, reminders...)
- Personalizing emitted documents
- Generating transmission queries to a fax operator .

No fax cards

Fax cards equipped with a processor are important cost factors. Integrating a company's PABX via TO/T2 connections can seriously have its impact on budget . Not to mention the malfunctioning risks and that their installation require the presence of the software publisher or of the service network integrators.

Transmission Band

Owner of several thousands of fax lines throughout Europe, the operator guarantees the redundancy of its infrastructure as well as the routing of the fax within a conformable delay.

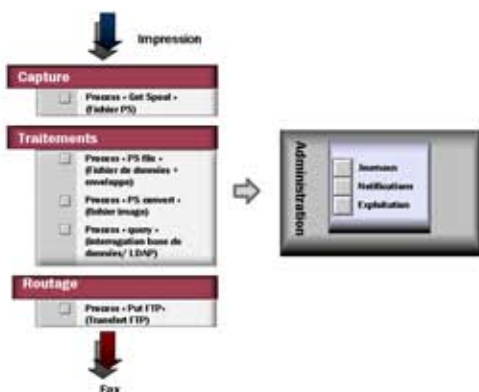

Tracking

An acknowledged fax receipt remains for many sectors an essential element in exchange traceability. Providing this element of proof within a working tool is the substructure of a commercial exchange.

This software part is stored within the activity log, transmission receipts may be therefore printed on-the-fly, sent out by e-mail or simply written in an applied data base. The fax operator acts as a third-party trustee for this transaction.

Installation

Sold as a "try and buy"software, it is designed to be integrated into existing infrastructure without the use of external resources and therefore not imposed for

Purchasing a platform fax network or opting for the ASP fax solution via a browser?

BeesNEST offers the best of both worlds...

- **Minimum operating costs**
- **Sizeable Transmission Band**
- **Trade field integration**
- **Exchange tracking**

If you think that BeesNEST is the solution then: Download the product directly from the Website, install it alone or with the help of the publisher at no extra cost

Try it and buy it...
